Summary: Restore wetlands (aka “estuarine habitats”) so they can help improve water quality, reduce flooding, adapt to climate change, and support fish, birds, and other animals & plants that live there.

Complete Draft Text: Restore, enhance and/or create estuarine habitats (intertidal mudflat, salt marsh, tidal channels, & marsh/upland ecotone) to provide ecosystem functions and services, such as water quality improvement, shoreline stabilization, carbon sequestration, resistance and resilience to climate change and associated effects, and fish & wildlife support.
Summary: Protect the wetlands from negative impacts of human activity.

Complete Draft Text: Protect the existing and restored estuarine habitat and associated wildlife from detrimental anthropogenic impacts (direct and indirect) associated with surrounding development.
GOAL 3

**Summary:** Provide ways for the community to engage with natural resources through access, recreation, and education.

**Complete Draft Text:** Provide new and/or improve opportunities for public access, education, research, and recreation in ways that improve understanding and stewardship while protecting the existing and restored estuarine habitats and associated wildlife.
